

ADDENDUM 1

2026-RFP-011

Climate Hazard Mapping: Phases 2 & 3

Addendum Effective

June 12, 2026, 2:30 PM local (Iqaluit) time

City Representative

Reiko Kobayashi, City Planner

This Addendum provides clarification in response to additional inquiries received following the issuance of the Request for Proposals.

1 Available Data

1.1 Phase 1 Report Data:

The Phase 1 Data Gap Analysis appears to be missing a large amount of historical geotechnical data from Iqaluit. Will a database (in Excel spreadsheet format or other) of all the historical geotechnical data considered in Phase 1 be available to the successful bidder to inform Phase 2 work?

Data included in the Phase 1 Report reflects the geotechnical data that was available to the City at the time the report was completed. The City will provide the successful Proponent with the geotechnical investigation reports, borehole records, and related subsurface investigation data, in PDF format, that informed the Phase 1 Report. An Excel spreadsheet compiling data extracted from those reports will also be provided.

1.2 Revised Submission Details:

Does the City of Iqaluit have high-resolution (i.e., 1 m DEM or better) LiDAR or other topographical survey data available within the geophysical “screening” area?

The City of Iqaluit does have high-resolution (0.5-1 m) DEM data available within the geophysical “screening” area. This data will be made available to the successful Proponent following contract award.
