WASTEWATER/SEWER LINE CLEANING AND CCTV ASSESSMENT 2026-RFT-014

The Contractor shall coordinate the sequencing and scheduling of the work with the City's Public Works Department to minimize disruption to day-to-day municipal operations, road users, residents, and businesses.

Approximate Quantity of Work

The total length of sewer pipe expected to be cleaned and inspected under this assignment is approximately 4117 meters.

This quantity is an estimate only and is provided for bidding purposes. Actual quantities may vary based on field conditions, accessibility, existing infrastructure, operational constraints, and direction from the City. Payment shall be based on the actual measured linear meters of sewer pipe successfully cleaned and/or inspected, in accordance with the unit prices provided in the Cost Submission Form. The above routes and sewer segments are not exhaustive. The City may add, delete, or modify sewer sections based on operational requirements, field conditions, accessibility, or available budget.

Sewer Cleaning Requirements

The Contractor shall clean and flush the sewer pipelines prior to completing CCTV inspection. Cleaning shall be completed to a standard sufficient to allow proper visual inspection of the pipe wall, joints, service connections, defects, and other observable features.

The RFT contemplates the use of high-pressure water jetting and a high-flow vacuum truck to break down, flush, remove, and manage wastewater, sediment, sludge, sand, grit, and debris from the sewer pipes. The Contractor may also propose alternative or supplementary cleaning methods where appropriate, including but not limited to:

- hand or power rodding;
- balling;
- bucket machine cleaning;
- vacuum extraction;
- flushing; or
- other industry-accepted sewer cleaning methods.

A combination of methods may be used where necessary to remove blockages, build-up, or debris and to provide adequate access for the CCTV crawler.

Sludge, dirt, sand, grit, and debris resulting from cleaning operations shall be removed from the downstream manhole or access point of each segment. The liquid portion of material removed may be returned to the sewer system, where acceptable to the City. Solid and semi-solid material shall be collected, handled, transported, and disposed of at a site approved by the City of Iqaluit.

CCTV Inspection Requirements

Following cleaning, the Contractor shall complete CCTV inspection of the designated sewer sections for condition assessment purposes.

The Contractor shall complete the inspections in accordance with applicable industry standards and the requirements of this RFT. Inspections shall include clear video footage, proper identification of pipe segments, documentation of defects, and appropriate condition coding.

The following requirements shall apply:

- The maximum allowable water level within the pipe during CCTV inspection shall be 20% of the pipe diameter.
- Where water levels exceed 20%, the Contractor shall use appropriate cleaning, flushing, jetting, or other methods to reduce the water level to allow proper inspection.
- The Contractor shall use a "flush and follow" method where required, with the inspection camera following a short distance behind the water jet to lower standing water and improve visibility.
- The camera shall be advanced at a controlled speed suitable for accurate observation, recording, and defect coding.
- The camera operator shall pan, tilt, and zoom as required to clearly document observable defects or features.

- The camera operator shall focus on all visible service connections, joints, cracks, fractures, deformation, corrosion, deterioration, deposits, infiltration, obstructions, and other deficiencies.
- The camera shall pan and tilt into each service connection where practical.
- All CCTV footage shall be clearly labelled by pipe segment, manhole/access vault references, date, direction of inspection, and other relevant information.

Access Vaults, Manholes, and Field Conditions

The access vaults and manholes identified in the RFT documents, tables, or drawings are based on available City records and may vary from actual field conditions. The Contractor may encounter more or fewer access vaults, manholes, or access points than shown in the information provided.

Previous infrastructure assessment data are available on the City's GIS. However, this information may be outdated and may not accurately reflect current site conditions. The Contractor shall rely on its own field verification and shall notify the City of any discrepancies, access limitations, missing structures, unsafe conditions, or other concerns encountered during the work.

Coordination with City Operations

The Contractor shall coordinate all work with the City's Public Works Department. Work shall be planned and executed to minimize impacts to municipal operations, wastewater system performance, residents, businesses, traffic, and public access.

The Contractor shall provide the City with a proposed work schedule prior to commencing work and shall update the City as required throughout the project. Any required shutdowns, access restrictions, traffic impacts, or operational disruptions shall be coordinated with and approved by the City in advance.

Unforeseen Conditions and Inaccessible Sections

If the Contractor encounters collapsed pipe, severe blockages, structural failure, excessive debris, unsafe access conditions, or any other issue that prevents cleaning or CCTV inspection, the Contractor shall immediately notify the City's Public Works Department.

The Contractor shall not proceed with additional corrective work outside the approved scope without prior written authorization from the City.

Where a sewer section cannot be cleaned or inspected due to structural failure, blockage, or access constraints, the Contractor shall document the issue, provide photographs or video evidence where possible, identify the affected segment, and provide recommendations for next steps. The City may discuss alternative solutions with the Contractor on a case-by-case basis.

Deliverables

The Contractor shall provide the following deliverables to the City upon completion of the work, or progressively as requested by the City:

1. **CCTV Inspection Recordings**
Complete CCTV video files for all inspected sewer segments, submitted in a digital format acceptable to the City.
2. **Inspection Data and Electronic Files**

3. **Condition Assessment Report**
A written report summarizing the condition of inspected sewer segments, observed defects, operational issues, structural concerns, and areas requiring attention.
4. **Deficiency Summary**
A summary table identifying deficiencies by location, pipe segment, defect type, severity, and recommended priority.
5. **Recommendation Report**
A report outlining recommended maintenance, repair, rehabilitation, replacement, or further investigation based on the CCTV findings and condition assessment.

**WASTEWATER/SEWER LINE CLEANING AND CCTV
ASSESSMENT
2026-RFT-014**

6. Mapping or Segment Reference Information

Updated segment references, where applicable, identifying inspected sections, incomplete sections, inaccessible sections, and any discrepancies from the City's existing records.

7. Summary of Incomplete or Inaccessible Work

A list of any sewer sections that could not be cleaned or inspected, including the reason, supporting documentation, and recommended next steps.

Measurement and Payment

Payment for sewer cleaning and CCTV inspection shall be based on the actual linear metres of pipe cleaned and inspected, in accordance with the unit rates submitted in the Cost Submission Form.

The estimated lengths provided in the RFT are for bidding and planning purposes only. The City does not guarantee the total quantity of work. Actual quantities may increase or decrease depending on site conditions, access, operational requirements, and the City's direction.
